This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

1901-1902.

THE DENVER HOMEOPATHIC COLLEGE

Eighth Annual Announcement

of

THE DENVER

Homeopathic College.

SESSION 1901-1902.

Denver, Colorado.

DOVE, PRINTER, DENVER.
1901.

An Invitation.

Members of the profession, when in Denver, are cordially invited to visit the Hospital, corner of Park Avenue and Humboldt St. During the session of the College, the Faculty will gladly welcome members of the profession who may be interested in the work of the school.

ALL CORRESPONDENCE SHOULD
BE DIRECTED TO
DAVID A. STRICKLER, M. D., REGISTRAR,
705 FOURTEENTH STREET,
DENVER, COLORADO.

CALENDAR.

1901-1902.

1901.

September 16–17—Entrance Examinations.

September 18—Introductory Lecture at the College, at 8 P. M., by Prof. Edward H. King, M. D.

September 18—Reception at the College at 9 P. M.

September 19—Lectures commence.

November 28—Thanksgiving Day (holiday).

December 24—Christmas Vacation begins.

1902.

January 2—Lectures Resumed.

February 22—Washington's Birthday (holiday).

April 22—Lectures terminate.

April 23—Final Examinations begin.

April 24—Commencement.

BOARD OF DIRECTORS.

CHARLES W. ENOS . . . . . President.
WILLIAM A. BURR . . . . . Vice-President
CHAUNCEY E. TENNANT . . . . . Secretary.
EDWARD H. KING . . . . . Treasurer.

TERMS EXPIRE AS FOLLOWS:

Climatic Advantages of Denver.

THE "Queen City of the Plains" is situated near the foot-hills, and from its streets can be seen hundreds of miles of the Rocky Mountain Range, with its magnificent peaks, canons and arroyas. These lend a ceaseless enchantment to the lovers of the grand and beautiful. The city has an altitude of one mile above sea-level, and is the most important health resort on the American continent. The dry and bracing mountain air, the many successive days of sunshine, are not only conducive to health, but marked intellectual activity. The student with impaired health or a tendency to weak lungs, or who finds the winters in the large Eastern cities too severe for his strength, will find Denver a most delightful place to spend the college year. The winters are pleasant, mild and short, and the most delicate student can safely, comfortably and profitably attend the entire session of this College.

Denver as an Educational Center.

DENVER is rapidly becoming a great educational center. As evidence of this fact we refer to its universities, colleges, academies and schools. It is a rallying point for many of the great educational conventions, and they find here a cordial welcome, and a society in hearty sympathy with all social and intellectual progress. The student is surrounded by congenial influences and experiences in them a splendid stimulus to study.

INTRODUCTORY.

THE Denver Homeopathic College, in presenting its Eighth Annual Announcement to the profession, and to those contemplating a study of medicine, takes pride in its history.

Seven years ago the Homeopathic profession of Denver decided that the interests of our school demanded the organization of a college in this great and growing Rocky Mountain region. Students all over this section were required to go a great distance to secure the opportunities of an education that could be provided for much nearer home. The history of our college demonstrates the wisdom of this decision.

The College first opened its doors to students in October, 1894, with twenty-six matriculants. Each succeeding year has shown a gratifying advance over the preceding, both in the number of students and in the facilities for teaching them.

A new building has been erected on grounds previously purchased for the purpose, on the corner of Park

Avenue and Humboldt Street, in the heart of the most beautiful residence portion of the city. It is high and dry and gives an unobstructed view of the Rockies.

The building is a three-story brick structure with stone trimmings. The woodwork is the best grade of Georgia yellow pine finished in oil. As a whole, it is a model in every department; modern in its appointments, beautiful in all its parts, and well adapted,—the Hospital for the care of patients, the College for the instruction of students.

We are especially pleased with the operating room, its cream tiled floor, its enameled cement walls, its basins of the very latest and improved patterns, in which the hot, cold and waste waters are controlled by the foot of the operator. The preparatory room is completely furnished with apparatus for sterilizing every article used in modern surgical procedures, and the demands of the most fastidious operator may be easily and promptly met.

From its inception the growth of the College has been steady and material.

The policy of the College is to receive no student who has not been fitted by previous study to do good work. To this end a diploma from a good high school, or its equivalent, is required for entrance. The course of instruction extends over a period of four years.

The three features which we aim to make distinctive in the College are:

First—Teaching by assigned lessons, recitations and lectures.

Second—Monthly examinations.

Third—Clinical instruction.

By assigned lessons we do away with the laborious note taking, thus permitting the student to make the best possible use of his time during recitations, while at the

same time the professor is allowed full scope for originality and individuality in teaching.

The method of assigned lessons has proven most efficient in the best literary colleges, and is being more and more fully adopted by teachers of medicine who have tried both methods.

By monthly examinations we encourage more uniform study throughout the college term, and are enabled to keep close track of the work done by individual students. Any student having a monthly average of 80 per cent. or over on any subject is excused from final examination on the same at the end of the term. This plan has proven satisfactory alike to student and professor. It encourages steady application and obviates the necessity of excessive study at the end of the term.

ANNOUNCEMENT.

THE introductory lecture to the eighth annual session of the Denver Homeopathic College will be given by Prof. Edward H. King, M. D., Wednesday, at 8 P. M., September 18th. The regular order of lectures and recitations will begin Thursday morning, September 19th, 1901.

Entrance Examinations. Entrance examinations for those not able to present proper credentials, will be conducted Monday and Tuesday, September 16th and 17th.

Requirements for Matriculation. Students will be required to give the Faculty satisfactory evidence of their fitness for the study of medicine, as follows: *First*—By the possession of a diploma from a literary college, university, an academy, normal school or high school; or

Second—A first grade teacher's certificate, or other satisfactory documentary evidence of scholarship; or

Third—A previous matriculation at some reputable literary or medical college; or

Fourth—Persons who do not possess such credentials will be referred to the DENVER NORMAL AND PREPARATORY SCHOOL, Frederick Dick, Principal, for examination. A fair knowledge of Orthography, English, Composition, Arithmetic, Geography, Chemistry, Modern History and Latin is compulsory. A student may be conditioned on one or more studies, but the condition must be removed within six months, and at the student's expense.

Students who wish to pursue a special course of study in medicine, other than for the purpose of receiving a degree, are exempt from the foregoing requirements.

A person who has attended one, two or three annual terms in other accredited medical colleges must present a satisfactory certificate of qualification.

Graduates of old school medical colleges requiring four years of study, may be admitted to the senior class, provided they pass an examination in junior year materia medica, therapeutics and the philosophy of homeopathy.

No student will be admitted later than October 15, 1901, without a special examination upon all the work compassed by the college up to that date.

Examinations. At the close of each month the professor will hold an examination which will cover the entire ground compassed in his department during that period. If, in a given case, the general average of these examinations during the college year shall have reached eighty per cent. or upwards, the result will be considered decisive; if below this point, a final examination must be held at the close of the session.

Any student whose average falls below fifty per cent. will not be permitted to take a final examination.

A student who is rejected must go through the entire senior course again and be re-examined in all the studies of this course. For this term a fee of $25.00 will be charged.

A comprehensive record of each student will be kept by the Registrar. His relative standing will be determined from his oral reviews, laboratory work, written exercises, industry, perseverance, aptitude, attendance and examinations.

The Faculty will follow in detail the course as outlined in this Announcement, reserving the right to make such changes in the curriculum as modern medical progress may demand, or they may deem advisable.

Requirements for Graduation. The candidate for the degree of Doctor of Medicine must have complied with the following conditions: He must have attained the age of twenty-one years.

He must be of good moral character.

He must have pursued the study of medicine for at least four years, exclusive of preparatory work.

He must have attended four full courses of lectures of not less than six months each, the last of which must have been in this College.

He must have pursued the study of practical anatomy during two college years, under the direction of a demonstrator, and during this time he must have dissected at least the lateral half of the body.

He must have received clinical instruction throughout three college years.

He must maintain an individual average on all examinations of not less than eighty per cent., and must not average less than seventy-five per cent. in any one branch.

He must have made satisfactory arrangements for the payment of all the College fees and dues.

Conduct of Students. The Faculty reserves the right to determine whether any student shall pass from one grade to the next; whether he shall be entitled to a degree; or whether he shall terminate his connection with the College on what the Faculty may deem mental or moral unfitness for the profession, disorderly conduct, or failure to comply with the rules of the College.

THE FACULTY.

SOME years ago a gentleman asked a friend to define a college. The friend had in previous years sat under the instruction of Mark Hopkins, and he replied: "A log with Mark Hopkins a-straddle one end, and a student a-straddle the other,—that is all that is necessary for a college." That man knew Mark Hopkins to be a great teacher; and he saw that the efficiency of a college must be measured primarily by the strength of its faculty. Thus measured, the Denver Homeopathic College has now attained a very high standard; for while its equipment has left the log stage far behind, its faculty rises well up to the Mark Hopkins plane. The work done by the faculty last year was of a very high order, and is a source of pardonable pride to all connected with the college. Last year's faculty is to be retained this year, and is to be materially strengthened by the addition of several new members, so that the increasing scope and demands of medical science shall be fully met. Members of the faculty are assigned work in the different departments with special and careful reference to their peculiar qualifications.

The science of Homeopathy is systematically taught in all its branches; and every available means of instruction is used to give the student a comprehensive knowledge of all subjects pertaining to the practice of medicine and surgery.

CURRICULUM.

THE course of study required in The Denver Homeopathic College consists of four years, of seven months each, and is divided into four distinct grades as follows:

Freshman Year.

Anatomy. Osteology. Articulations. Muscles. Dissections during the last half of the session.
Physiology. Chemistry of the body, Respiration, Circulation and Digestion.
Physics and Inorganic Chemistry. Laboratory work.
History of Medicine and Organon.
Histology.
Microscopy.

Sophomore Year.

Anatomy. Nervous and Circulatory Systems, Visceral and Regional Anatomy. Dissections.
Physiology. Nervous System and Nutrition.
Chemistry. Organic, Urinalysis, Toxicology and Laboratory work.
Bacteriology.
Surgery, Minor work and Bandaging.
Embryology.
Materia Medica. Pharmacology, History and Physiological Action of Drugs, Outlines of Symptomatology.
Sanitary Science and Hygiene.
General Clinics.

Junior Year.

Pathology. General and Special.
Materia Medica.

Surgery. Principles, Fractures and Dislocations.
Theory and Practice of Medicine.
Obstetrics. Anatomy of Pelvis and Mechanism of Labor.
Gynecology. Medical and Surgical.
Dermatology.
Venereal Diseases.
Pedology.
Genito-Urinary Diseases.
Physical Diagnosis.
Climatology.
Clinics. General and Special.

Senior Year.

Materia Medica.
Surgery. Operative, Regional and Orthopedic.
Obstetrics.
Gynecology. Medical and Surgical.
Medical Diagnosis.
Theory and Practice of Medicine.
Mental and Nervous Diseases.
Ophthalmology, Otology, Rhinology and Laryngology.
Medical Technology.
Medical Jurisprudence.
Clinics. General and Special.

DEPARTMENTS.

Anatomy.

Prof. WALTER JOEL KING, M. D.
Prof. JOHN H. MORROW, M. D.
Instructor OTTO S. VINLAND, M. D.

Anatomy began with the human race, and we have reason to believe that our primal ancestors knew at least some of the landmarks of the science of osteology. No physician or surgeon regrets the time spent in mastering the details of this exceedingly interesting and important subject. With this knowledge comes a strong confidence and a conscious ability to deal with the many and perplexing problems which confront the physician that no other branch of science can supply.

This subject will be presented to our students in a novel and interesting way. Thoroughness will characterize the work; and a good foundation will be provided upon which the student may build his future knowledge of medicine and surgery.

All practical anatomical work will be under the personal supervision of the Professor.

PROF. KING will lecture three times each week to the class of the first year, devoting his time to the subjects of Osteology, Articulations and Muscles. Practical anatomy will be demonstrated in the dissecting room.

DR. VINLAND'S course will include Circulation, Lymphatics, Viscera and Regional Anatomy, and the Great Sympathetic Nervous System. Two lectures each week.

PROF. MORROW will instruct the members of the Sophomore class in all the details of the Cerebro-spinal Nervous System, giving to this exceedingly intricate subject all the care and skill of an experienced teacher.

TEXT-BOOKS—Gray, Nancrede's Essentials, Ramsey's Applied Anatomy.

Physiology.

Prof. A. C. STEWART, M. D.

This department of our college instruction is kept constantly in advance of previous years by a careful and painstaking scrutiny of journals, laboratory reports, discussions and new works upon the subject. Too great care cannot be exercised to extend our knowledge of a subject that is steadily advancing and is so absolutely necessary to the physician—the keystone to his knowledge.

An understanding of normal function must of necessity precede any attempt at the study of pathology.

PROF. STEWART, with proper assistance, will continue the high standard of instruction that has characterized this department in our college, and the student may feel assured that at the close of the course he will be qualified to enter intelligently upon the study of pathology and all that it means to the practicing physician.

TEXT-BOOKS—Chapman, American Text-book, Flint, Kirk.

Materia Medica.

Prof. JAMES P. WILLARD, M. D.
Prof. GRANT S. PECK, M. D.
Instructor HORACE T. DODGE, M. D.
Instructor JAMES W. MASTIN, M. D.

The course of instruction in this department begins with the second year, and continues to the end of the college course. If the physician hopes to succeed he must have a thorough understanding of his materia medica; and not less than three years of careful work are required to prepare the student for the successful mastering of this very complicated branch.

DR. HORACE T. DODGE takes the initiative in this work, and drills the student in all the essential details of homeopathic pharmaceutics, giving practical instruction in the selection of drugs and chemicals, and in making tinctures, dilutions, triturations, tablets, etc., thus en-

abling the student to prepare his own medicines intelligently. He will also give many interesting items of history relating to various drugs, and a general outline of their physiological action, thus laying a good foundation for the work of succeeding years.

In the Junior year symptomatology, with all its elaborate details, will receive careful attention at the hands of DR. JAMES W. MASTIN. Much care will be given to the intelligent interpretation of the characteristic indications as they occur, and the method of using them according to recognized standards of practice.

The teaching of the Senior year will be adapted to the needs of advanced students, studying the pathogenetic effects of drugs and their therapeutic relation to diseases. Teaching by comparison will be a feature of the work, while the important indications and general symtomatology will be carefully presented. The object of this year's teaching will be so to instruct the student both in the didactic and clinical study that he will be prepared to successfully contend with disease when he enters the field of practice.

PROF. JAS. P. WILLARD and PROF. GRANT S. PECK will be responsible for this chair, and we are confident the instruction will be given with accuracy and in an interesting manner.

TEXT-BOOKS—Cowperthwaite, Farrington, Dunham, Allen's Handbook, Herring's Guiding Symptoms, The National Dispensatory, Hahnemann's Mat. Med. Pura.

Theory and Practice.

Prof. WILLIAM A. BURR, M. D.
Prof. CHAUNCEY E. TENNANT, M. D.
Instructor EDWIN J. CLARK, M. D.

Instruction in this practical and important department will extend through the sophomore, junior and senior years and will be both didactic and clinical. It will include the etiology, the symptomatology, the

pathology, and the diagnosis of the various forms of disease. Particular stress will be placed on the treatment, which will be considered in its different phases. The prophylaxis and all the necessary sanitary, hygienic and dietetic measures will be fully considered.

The homeopathic treatment will be given all due prominence, and the latest and best accessory measures, will receive all needed attention.

Nervous and Mental Diseases, Medical Diagnosis and Diseases of the Chest, Dermatology, Genito-Urinary Diseases and Diseases of Children have each been assigned to a special Chair in this College, and a description of their work appears under their respective heads. The balance of the work belonging to this large department has been distributed as follows :

PROF. W. A. BURR will lecture on the diseases of the liver, the different forms of rheumatism and gout, and the diseases of the blood. In the presentation of these most practical subjects, all needed models and other helps will be used.

He will also give a course of instruction on The Principles of Homeopathy. The Denver College recognizes the paramount importance of a full acquaintance with the basal principles underlying the New School of practice, and great pains will be taken that every student be made familiar with the great law of cure.

PROF. C. E. TENNANT will lecture twice each week, devoting his entire time to the consideration of the Diseases of the Digestive Tract and the Acute Infections. His thorough knowledge of the chemistry of digestion will enable him to do most thorough work in the presentation of these subjects.

In the study of the diseases of the blood and the diseases of the digestive tract, the results of the latest re-

searches in chemistry and microscopy, in so far as they have an important bearing on these subjects, will be carefully considered.

DR. E. J. CLARK will also lecture twice each week, giving a course of instruction on the various fevers that affect the human body. Special stress will be placed on such points as will prepare the student to recognize the various fevers, and enable him to select the best treatment for each case, including the selection of the curative remedy.

TEXT-BOOKS—Arndt, Rave, Anders, Goodno, Baehr, Lillianthal, Dake, Salinger-Kelteyer.

Diseases of Children.

Prof. EDWARD H. KING.

In consideration of the great importance attached to recent investigations into the cause, course and complications of many of the diseases of childhood, this chair will devote two didactic lectures each week to the consideration of these subjects. It is essential that students be thoroughly informed, from a practical and scientific basis, of all that pertains to the welfare of children, in their physical growth and their care in disease. These will be fully presented. Prompt attendance upon lectures and careful attention to all the examinations will be required of the members of this class. A free use will be made of Clinics to demonstrate the teaching of this chair.

TEXT-BOOKS—Tooker, Raue, Rotch's Pediatrics, New Edition.

Physical Diagnosis. Diseases of the Chest.

Prof. GEO. E. BROWN, M. D.

The student is made familiar with the physical signs of health, with respect more particularly to the organs and tissues of the thorax. He is then carefully drilled by

lecture, quiz, and clinic in the objective evidences of disease. In the senior year the diseases of the heart and lungs and related organs are specifically taken up and studied in their etiology, symptomatology, pathology, complications and treatment, including the medicinal, climatic, hygienic, and accessory.

TEXT-BOOKS—Tyson, DaCosta, Musser.

Dermatology.

Prof. JOSEPH B. KINLEY, M. D.

The successful management of skin diseases requires great care and discrimination. PROF. KINLEY'S extensive experience in the treatment of disorders of this character makes him a valuable acquisition to our corps of instructors. His course during the past year was greatly enjoyed by the students. He will extend his instruction during the coming year over a still wider range and thus materially enhance its value.

TEXT-BOOKS—Kippax, Lillianthal, Duhling.

Surgery.

Prof. JOHN WESLEY HARRIS, M. D.
Prof. JOHN H. MORROW, M. D.
Instructor JAMES B. BROWN, M. D.
Instructor GUY S. VINYARD, M. D.

The work in this department covers the principles and practice of modern surgery in all its branches; the didactic teaching is thoroughly demonstrated by clinics and on the cadaver. The course of instruction is graded. The advantages of this method are manifest to the student of surgery as he discovers that each year's study has prepared him for a more intelligent understanding of the work of succeeding years.

In the sophomore year, DR. JAMES B. BROWN will teach the following subjects : Surgical bacteriology and pathology ; asepsis and antisepsis ; anesthetics and the methods of administering them ; preparation of dress-

ings and care of instruments. He will also give practical instruction in minor surgery and bandaging.

In the junior year PROF. HARRIS will confine his teaching to the careful consideration and elucidation of the underlying principles of modern surgery, and the study of the pathology, diagnosis and treatment of tumors.

DR. GUY S. VINYARD will give a practical course on surgical anatomy, teaching the student how to apply the knowledge attained during the first and second years to the practice of surgery, impressing on the mind by methods both novel and unique, a full understanding of all the essential anatomical and surgical landmarks. The teaching of this course will be fully demonstrated on the cadaver.

In the senior year PROF. MORROW will give a complete course on fractures and dislocations, and orthopedics, demonstrating the use of the various splints and apparatus used in this class of surgical work. PROF. HARRIS will treat fully of operative surgery, including amputations, brain, chest, and abdominal work. Extensive use will be made of the operations at the Homeopathic Hospital, which furnishes abundant facilities for illustrating the teaching on these subjects. The clinics at the County Hospital and the Uzzell Tabenacle Dispensary supply valuable material to the surgeon for practical instruction in operative work.

TEXT-BOOKS—Homeopathic Text Book, Da Costa, International Text-Book of Surgery, American Text Book, International Encyclopedia of Surgery, Dennis, Park.

Obstetrics.

Prof. EMIL G. FREYERMUTH, M. D.

Prof. RUPERT O. BUTTERFIELD, M. D.

This department of our college is divided into junior and senior work. The students will be instructed in all the principles essential to a thorough understanding

of the science and art of obstetrics. Thorough drilling in aseptic midwifery, the diagnosis of presentation and position, the management of labor, normal and abnormal, the use of the forceps, and the various obstetric operations will be features in the course.

The students of the senior class will be under the special care of PROF. FRYERMUTH, whose reputation is a guarantee of great care and thorough work. He will conduct the clinic at the County and Homeopathic Hospitals, and demonstrate on the manakin and at the bedside all important obstetric operations; members of the senior class will have opportunities of witnessing accouchments, and each one will have charge of one or more cases from the onset of labor to the end of the puerperum. The course will be thorough and practical.

PROF. BUTTERFIELD'S relations will be with the juniors, instructing them in the following subjects: Menstruation and Ovulation, Embryology, Diagnosis and Physiology, Presentations and Position, and supplementing these with a complete course on the mechanism of labor.

TEXT-BOOKS—Leavitt, Jewitt, Hirst, Lusk, Grandin and Jarman.

Gynecology, Medical and Surgical.

Prof. WILLIAM R. WELCH, M. D.

The responsibility for the work of this department passes into new hands, and we congratulate ourselves on being able to secure the services of one so competent for the task. PROF. WELCH is now in Europe, where he will spend several months studying the latest developments in gynecological and surgical science. In the hospitals of Berlin and Vienna he will enjoy opportunities for extensive study and observation. The Professor will return to Denver this fall in time for the opening lecture in our College, and devote his energies to

instructing our students during the coming session. The course will consist of didactic and clinical lectures each week, and will cover both medical and surgical work.

TEXT-BOOKS—Wood, Kelly, Keating & Coe, Hart & Barber.

Ophthalmology and Otology.

Prof. DAVID A. STRICKLER, M. D.

The instruction in this department is both clinical and didactic. Special attention is given to methods of examination, to the use of special instruments and to differential diagnoses, as well as to the general principles involved in the treatment of diseases of the eye and the ear.

The reciprocal relationship between diseases of the eye and of other organs of the body is carefully taught.

Middle ear lesions as sources of progenic infection of the intra-cranial structures, together with the most approved methods of treating such lesions and infections, are fully explained.

TEXT-BOOKS—Eye: Norton, Fuchs. Ear: Bacon Dench.

Nervous and Mental Diseases.

Prof. CHARLES W. ENOS, M. D.

The diseases of the nervous system threaten to be the diseases of the future, due largely to modern business methods and social life; especially is this true in the large cities. In no department of medical science has greater advancement been made in recent years than in that relating to diseases of the nervous system. The basis of the work in the lectures delivered in this course will include the main facts gathered and condensed from every available source. It will be the aim of the lecturer to simplify the various subjects so that the student may easily comprehend them, and be able to ac-

curately diagnose the various mental and nervous diseases.

TEXT-BOOKS—Elliott, Martin, Gowers, Dana.

Rhinology and Laryngology.

Prof. GRANT S. PECK, M. D.

The diseases that require the attention of this department present a great variety, both medical and surgical. In the diagnostic investigation of these cases the greatest manual dexterity is demanded, and in the treatment and subsequent management, the selection of the remedy is of supreme importance; while dietetic and hygieneic condition must be carefully looked after. The teaching of this chair will be concise and practical, avoiding mere theories and dealing with the subject in a thorough and scientific way.

PROF. PECK has entire charge of the eye, ear, nose and throat clinic at the Tabernacle Dispensary, where he will have abundant facilities to demonstrate his teaching, and present to the class a long list of those cases that demand so much of the time of the busy practitioner.

TEXT-BOOKS—Cloakley, Ivans, Sajous, Bishop.

Pathology, Histology and Microscopy.

FRED. PEASLEE TUXBURY, M. D.

These very important branches of medicine will be presented together. The comprehensive knowledge of the tissues in their normal state being necessary to a thorough understanding and recognition of the abnormal, special work will be devoted to Histology. One hour each week will be devoted to lectures on the subject and two hours each week will be spent in the laboratory under the direct supervision of the instructor. Histology will be considered in the freshman year.

Pathology will be considered in the junior year. Two hours each week will be devoted to lectures on the

subject and the instructor will meet the class in the laboratories for two hours each week. Students will be shown the technique of preparing and mounting specimens for preservation as well as required to do the same. Each student will thereby secure a collection of Histological and Pathological specimens which are of much value because of their having been selected from a vast amount of material.

TEXT-BOOKS—Stengel, Piersol, Clarkson.

Chemistry, Toxicology and Urinalysis.

OTTO G. FREYERMUTH, Ph. G.
ELBERT EELLS DEWEY.

A thorough and comprehensive consideration of these subjects will be maintained with special reference to medical chemistry.

MR. ELBERT EELLS DEWEY will have charge of the freshman class in the department of Inorganic Chemistry. Two hours each week will be devoted to lectures and four hours to laboratory work.

MR. OTTO FREYERMUTH will devote two hours a week to lectures to the sophomore class, and will meet the class in the laboratories four hours each week to personally supervise the practical demonstrations and tests that are to be made of the subjects previously presented before the class. Each student is required to do his own work under the direct supervision of the instructor. Organic Chemistry and allied specialties peculiar to the practice of medicine will be taken up in the sophomore year, including such subjects as Analysis of Water, Physiological and Clinical Chemistry, Proteid Compounds, Urinalysis and Poisons.

TEXT-BOOKS—Bartley, Platt's Qualitative Analysis, Mitchell, Purdy.

Medical Jurisprudence.

Hon. FRANK C. GOUDY,

MR. GOUDY is a member of the Bar of this city and will deliver a series of lectures on medical jurisprudence during the coming session,

and particularly on the following subjects: "The Doctor as an Expert Witness;" "Insanity as a Defense in Criminal Cases;" "Mal-practice;" "Duty of the Medical Profession to the Public, as well as to their Patients."

There are numerous cases, widely divergent in their nature, in which the medical and legal profession are brought into close relations. Interests of great importance are involved in many cases in which the physician appears as an expert witness, and his brother of the law as the attorney. It must, therefore, be apparent that a course of instruction in medical jurisprudence is of the utmost importance.

TEXT-BOOKS—Ewell, Taylor.

Genito-Urinary Diseases.
Prof. HARLEY K. DUNKLEE, M. D.

This chair will consider the diseases of the kidneys, ureters and bladder, also the disorders of the sexual organs, including venereal diseases. There will be two lectures each week, and a large dispensary experience that will be valuable to the student.

TEXT-BOOKS—Carleton's Works, Keyes.

Physics and Electricity.
GILES F. ROOSEVELT.

The principles and laws of physics, and their application to the science of medicine, are taught. Full instruction is given in the selection, adjustment and care of the many electrical appliances that may be utilized by the physician.

Dental Surgery.
ELISHA D. HINKLEY, D. D. S.

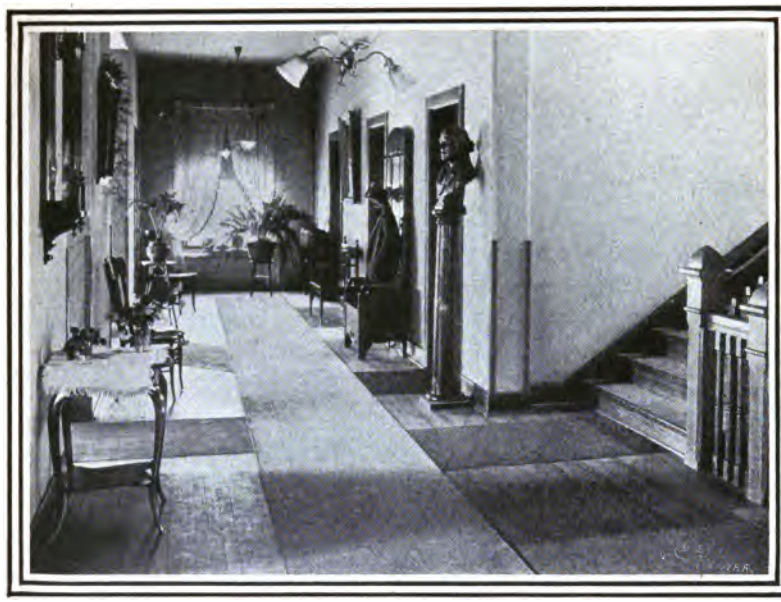
Will give a course of instruction on this subject, presenting such portions as will be of greatest interest to the students. Latest methods of treating dental disorders will be fully presented. Regular clinics will be held.

TEXT-BOOKS—Black, Tome, Garretson.

Sanitary Science and Hygiene.

These subjects will be treated in their relations to the general practitioner and public sanitarian. The lectures will comprise the following subjects: Air and Ventilation; Water and its Analysis; soils and localities and their influence on health and disease; management of contagious and epidemic diseases; sewerage; sanitary plumbing; disinfection; duties of health officers; personal hygiene, etc.

TEXT-BOOKS—Wilson, Parkes, Rohers.



THE COLLEGE.

THE College is new and complete, well lighted and pleasantly heated, situated in the nicest residence portion of the city, away from noise and bustle incident to city life, thus giving a quiet class room for both professor and student. It is located on the corner of Park Avenue and Humboldt Street, and can be reached from all parts of the city by the street cars.

The Laboratories.

The laboratories are abundantly furnished with suitable and late apparatus and material. It is, therefore, well equipped for an exhaustive study of Pathology, Chemistry, and Histology.

Additions have been made to the laboratories of the pathological and histological departments, and the

student will be taught the use of the microscope, and the preparation of tissues for examination and preservation.

Clinical Facilities. One of the most interesting and profitable features of medical study is the clinics; especially where the student comes in close touch with the teacher. In this respect our college is peculiarly fortunate, our facilities are abundant and our instructors are prompt in attendance and thorough in their methods of examination, while the greatest care is taken to teach the best and latest methods of treatment.

In the DENVER HOMEOPATHIC HOSPITAL charity patients are used for bedside teaching, and furnishes a great variety of interesting cases, and in each of the following institutions a large number of cases is presented for study.

THE ARAPAHOE COUNTY HOSPITAL, located on Sixth Avenue, is a large public institution in which medical and surgical clinics are held, and which are open to the students of all medical colleges. All seniors are required to attend these clinics. This is the general free hospital for Denver and Arapahoe County. In it thousands of patients are treated annually. It has a capacity of about two hundred beds, and furnishes clinical material of every variety. The Board of County Commissioners has, through its advisory committee, appointed a full staff of homeopathic physicians for this institution, and assign a certain proportion of the patients to their professional care.

THE HAVEN, located at 1148 Broadway, has accommodations for a large number of women and children, and furnish some very interesting cases.

THE "BELLE LENNOX" NURSERY has a capacity for sixty beds, and will furnish the students interesting material for study of the diseases peculiar to children.

Dispensaries.

THE UZZELL TABERNACLE DISPENSARY is located in a densely populated portion of the city and furnishes the largest number of cases of all kinds. Here the students are in regular attendance, under the care of the staff of physicians. This has been a popular place for treatment of the sick for years. During the coming year new building will be erected, and the needs of the medical departments will be carefully provided for.

THE COLLEGE FREE DISPENSARY is conducted by the faculty in the College building. The students will here see the forms of disease presented at the following clinics, which are held daily from 11 A. M. to 1 P. M.: Medical, Surgical, Gynecological, Eye, Ear, Nose and Throat, Genito-Urinary, Children's Dermatological, Mental and Nervous.

Library Facilities.

The Public Library, corner Fifteenth Street and Court Place, contains many thousands of volumes upon various subjects, and has, also a Medical Department containing a fine collection of text-books, periodicals, etc., which is open, free of charge, to all students.

House Physician.

An interne is to be selected from the graduating class, by competitive examination, to serve one year in THE DENVER HOMEOPATHIC HOSPITAL, commencing May 1. The position of interne at the County Hospital is open to graduates of the college, subject to the usual competitive examination.

COLLEGE FEES.

Matriculation ..... $ 5.00
Required of all, payable once only.

Tuition (annually)..... 100.00
This covers Demonstrator's, Chemical Laboratory, Examination and Graduation Fees.

Scholarship (five years) 300.00
Payable in advance.

Graduates from other Colleges..... 50.00

Deposit for Laboratories..... 5.00
This is to cover breakage. Balance will be returned.

Partial course arranged for by the Registrar.

Sons and daughters of physicians and clergymen will be admitted at one-half the tuition fee.

No fee will be returned.

COST OF LIVING.

Persons engaged in the study of medicine may desire to complete their course in the most economical way possible, in order to have an available supply of money for current expenses during the earlier years of professional life. Books, journals, and instruments are expensive and must be had.

The cost of living in Denver may be regulated largely by the habits and tastes of each individual. It need not cost to exceed five dollars per week. By adopting the club plan, as has been customary here, the cost may be very much reduced and brought within the reach of every one.

ALUMNI COURSE OF LECTURES.

COMMITTEE :

JAMES B. BROWN, M. D., WALTER JOEL KING, M. D.

One year ago the Alumni Association of this College instituted a course of lectures differing in charac-

ter and scope from that common to the College course. This new departure was a pronounced success from the first. A number of the prominent physicians of Colorado contributed the results of their expérience and investigations in scientific subjects, and in a popular way presented to the students and faculty material both interesting and instructive.

The committee, in conference with the faculty of the College, decided unanimously to continue this course through the coming year, and it is the intention of the committee to make the occasion of each address an event of more than ordinary interest, both intellectually and socially. The following well known physicians have each kindly consented to occupy an evening. The subjects and dates will be announced later.

Joseph B. Kinley, M. D., Denver.
C. F. Stough, M. D., Colorado Springs.
William R. Welch, M. D., Denver.

THE ALUMNI ASSOCIATION.

The wôrk accomplished by this Society during the past year has been highly appreciated by the College. The course of lectures provided were unique and of peculiar interest to both faculty and students, so much so that they have been requested to continue them during the coming year.

This association is organized for mutual improvement, and the advancement of the interests of its Alma Mater. Meetings are held each month. Alumni will please send to the Secretary their address, and other items of interest to the association.

JAMES B. BROWN, M. D., *President.*
OTTO S. VINLAND, M. D., *Secretary.*

DENVER HOMEOPATHIC CLUB.

The Denver Homeopathic Club is an organization of physicians, whose object is the study and investigation of all subjects pertaining to medical science; but its special office is the advancement of the principles of Homeopathy.

The leading current questions of interest to the profession, individual experiences and research, and clinical cases are among the topics that are discussed by the membership, thus presenting a wide range of thought and opinion.

The meetings are of great interest and profit to those in attendance.

The students of this College have a standing and cordial invitation to attend the sessions of the club.

The meetings are held in the Brown Palace Hotel, on the third Monday evening of each month.

E. G. FREYERMUTH, M. D., *President.*
E. J. CLARK, M. D., *Secretary.*

WOMAN'S HOSPITAL CLUB.

VISITING DAYS—TUESDAYS AND FRIDAYS.

This Club meets at 2.30 P. M. on the Second Wednesday of each month in the Hospital Office. A cordial invitation is extended to all friends to attend these meetings.

OFFICERS.—Mrs. J. P. Willard, *President;* Mrs. C. W. Enos, *Vice-President;* Miss Abbie Thurston, *Rec. Sec.;* Frona Abbott, M. D., *Cor. Sec.;* Mrs. W. J. King, *Treasurer.*

WAYS AND MEANS COMMITTEE.

Mesdames Willard, Nye, Stockdale and Ingersoll.

GENERAL REMARKS.

The members of the Faculty will take great pleasure in advising the students as to clinical advantages, text-books and methods of study.

Students are requested to report to the Dean, who will issue the tickets and give necessary information.

All correspondence should be addressed to the Registrar, DAVID A. STRICKLER, M. D., 705 Fourteenth Street, Denver, Colorado.

MATRICULANTS.

Andrew, Ida May ..... Colorado
Armbruster, Charles E. H..... Colorado
Bass, John Tiffany..... Indiana
Barstow, Martha A..... Ohio
